

Our patients like their prostate cancer removed.

And our urologists like offering an effective, minimally invasive cancer treatment.

No wonder *da Vinci* Surgery is the #1 treatment choice for prostate cancer*.

It's simple really - both patients and surgeons get what they are looking for in a prostate cancer treatment. Surgeons can operate with greater precision. Patients can have their cancer removed while minimizing potential side-effects such as incontinence and impotence. That's why more men choose *da Vinci* Surgery more than any other prostate cancer treatment.

If you have been considering treatment options for prostate cancer, it's time to ask about *da Vinci* Surgery. Learn more at www.baxterregional.org.

Remarkable★

*#1 treatment choice claim based on 2007 U.S. data on file.

While clinical studies support the effectiveness of the *da Vinci* System when used in minimally invasive surgery, individual results may vary. Surgery with the *da Vinci* Surgical System may not be appropriate for every individual. Always ask your doctor about all treatment options, as well as their risks and benefits. PN 873977 Rev.
